

- Typically a hog farm of this size moves weened piglets to another location within a few miles called a “Finishing Barn” due to the fact that they don’t want to move the young pigs too far for health reasons.
- According to Cumberland, llc they are currently seeking a second location to build the finishing barns.
- Within a 2-mile radius of the Highway 48 location, are 125 homes occupied full-time in addition there are cabins or vacation homes.
- There are 7 lakes: Big Wood Lake; Trade Lake (Big & Little); Bass Lake; Spook Lake; Peterson Lake and Isaac Lake. There are also many streams, rivers and ponds within this area as well.
- Also lying within the 2-mile radius is Grettum Flowage and Fish Lake Wildlife Refuge Area.
- All of these waters eventually flow to the St. Croix River.
- According to the preliminary application, the Highway 48 hog facility will have manure containment capacity of 6.8 million gallons, to be distributed on local area farmland.
- According to Wisconsin D.N.R. these large factory farms are required to have only 180 days of manure storage capacity. This means the potential manure out put will be closer to 14 million gallons annually.
 - Our intention is to make residents of the community aware of these new developments so that they have the opportunity to voice opinions or concerns before it is built. We are currently building a website:
www.knowcafo.org
To provide more information on the Trade Lake Industrial Hog farm and C.A.F.O. type animal production in general.
